AUTHOR: Yushkevich, A. A.

TITLE: On the differentiability of the transition probabilities of a homogeneous Markov process with denumerable number of states

PERIODICAL: Referativnyy zhurnal, Matematika, no. 11, 1961, 6, abstract 11V24. (Uch. zap. MGU, 1959, vyp. 186, 141-159)

TEXT: It is proved that homogeneous Markov processes with countable number of states are strictly of the Markov kind. This property is used in order to prove that the transition probabilities $p_{ik}(t)$ for $t > 0$ possess finite derivatives, if one of the limits

$$\lim_{t \rightarrow 0} \frac{1-p_{ii}(t)}{t}, \quad \lim_{t \rightarrow 0} \frac{1-p_{kk}(t)}{t}$$

is finite. If both of the limits are finite, then $p_{ik}(t)$ is absolutely continuous. An example is constructed, where $p_{ik}(t)$ possesses an infinite second derivative.

1/2 Yulkevich, I. P. and Rozenfeld, B. A. Commentary on
 the mathematical treatises of Djemsid Giyasiddin
Kashi. Istoriya Matematiki 7, 361-449 (1954) (Russian)

These two books together comprise a translation into
 Russian of the commentary on two books written by
 al-Kashi, al-Kashi or al-Kashi (fl. 1420)
 al-Kashi's Ar-Risala and Ta'lim. The publication does
 not give a complete text, but presents numerous
 examples of the work. The key to arithmetic, a
 work by al-Kashi, is mentioned by al-Kashi in two
 places, pp. 120, 217, 274 (1954). The Ar-Risala
 was published in Moscow, 1951. Deutsche Mo-
 nographien, 1951. Thus the main interest of the Russian
 edition is not deal with by Luckey
 and a number of worked examples in
 the book are freely
 and include the
 regular and semi-
 regular figures and area computations for

PHASE I BOOK EXPLOITATION

SOV/1366

Istoriko-matematicheskiye issledovaniya, vyp. 11 (Research in Mathematical History, Nr 11) Moscow, Fizmatgiz, 1958. 792 p.
3,000 copies printed.

Eds. (Title page): Rybkin, G.F. and Yushkevich, A.P.; Ed. (Inside book): Konoplyankin, A.A.; Tech. Ed.: Murashova, N. Ya.

PURPOSE: This book is intended for mathematicians and others interested in the history of mathematics, and may serve as the basis for a suitable university text on the history of mathematics, thereby filling the most serious gap in Soviet mathematical literature.

COVERAGE: This book contains reports made by members of the section on the history of mathematics at the Third All-Union Mathematical Congress which discussed problems of the history of mathematics and various articles on the significance of the history of mathematics

Card 1/8

Research in Mathematical History (Cont.)

SOV/1366

for mathematics itself and for the other sciences. There are also four articles on the history of mathematics in Czechoslovakia and Rumania, an article on the investigation of the algebraic roots of differential calculus in connection with a study of the mathematical writings of K. Marx, and an article on the work done on negative numbers by the Arabian mathematician, Abu-l-Wafa. A series of articles on various texts and documents connected with the history of mathematics, including a translation of the treatise De Configuratione Qualitatum by N. Oresme and two articles concerning it, concludes the book.

16(0) PHASE I BOOK EXPLOITATION SOV/3177

Matematika v SSSR za posled 10 let. 1917-1957 tom I. Obzoruyte stat'i (Mathematics in the USSR for the last 40 years, 1917-1957). Vol. I. Review Articles) Moscow, Fizmatgiz, 1959. 1002 p. 5,500 copies printed.

Eds: A. G. Kurosh, (Chief Ed.), V. I. Bityutkov, V. G. Bityutskiy, Ya. P. Mykin, G. Ye. Salova, and A. P. Yushkevich; Ed. (Inside book): A. P. Lapso; Tech. Ed.: S. N. Akhlanov.

PURPOSE: This book is intended for mathematicians and historians of mathematics interested in Soviet contributions to the field.

COVERAGE: This book is Volume I of a major 2-volume work on the history of Soviet mathematics. Volume I covers the period 1917-1957. Volume II will contain a bibliography of major works since 1957 and biographic sketches of some of the leading mathematicians. This work follows the tradition set by two earlier works: Matematika v SSSR za poslednyye 10 let (Mathematics in the USSR for the last 10 years) and Matematika v SSSR za poslednyye 20 let (Mathematics in the USSR for the last 20 years). The book is divided into the major divisions of the field, i.e., algebra, topology, theory of probability, functional analysis, etc., and contributions and outstanding problems in each discussed. A listing of some 1000 Soviet mathematicians is included with references to their contributions in the field.

AUTHOR: Gul'medov, Kh., Yushkevich, E.S.

TITLE: Structure and diffusion of meteor trails from photographic observations

SOURCE: Geomagnetizm i aeronomiya, v. 4, no. 5, 1964, 966-968

TOPIC TAGS: meteor, meteor trail, meteor trail diffusion, atmospheric turbulence, meteor trail structure

ABSTRACT: This paper presents the results of photometric measurements of the blackening density of successive photographs of stable meteor trails, observed on 21 October 1961 Astronomicheskaya observatoriya im. V.P. Engelgardta (V.P. Engel'gardt Astronomical Observatory) at Kazan'. Two trails were investigated. Partial results were previously published by the author (Geomagnetizm i aeronomiya, 1963, 3, No. 2, 309; Byull. VAGO, 1962, No. 32(39)). The photographs were taken with a camera with a "Yupiter-8" objective ($f = 1:2$, $F = 50$ mm). Seven or eight successive negatives were obtained for each trail. Measurements of the blackening density of the image of the trails were made using a MF-4 microphotometer with a magnification of 20. Information is given on the linear dimensions of the trails. It was found that the structure of the

Card 1/5

ACCESSION NR: AP4046297

trail in the second exposure was patchy, consisting of individual condensations. The largest condensations were formed at the beginning and end of the trail. The structure of the trail changed by the third exposure: the condensations in the middle part of the trail merged, only the large condensations at the beginning and end of the trail remaining. There was also a shifting of isophots from exposure to exposure. Figures 1 and 2 of the Enclosure show that with increasing height there is a change in both velocity and the coefficient of diffusion of the trails. These values correlate well with the variation in velocity of drift of the trails. There is an interrelationship between the structure of the trails and their rates of diffusion and drift; this can be attributed to the influence of atmospheric turbulence on the formation and development of trails. It is also shown that attenuation of the trail occurs not only as a result of diffusion, but also due to other phenomena which considerably accelerate this process. Brightness of the trail is also variable with height, as shown by Fig. 3 of the Enclosure. Orig. art. has: 3 formulas, 4 figures and 1 table.

TITLE:

Positron Spectra of the Dysprosium Fraction (Spektry pozitronov disproziyevoy fraktsii)

PERIODICAL:

Izvestiya Akademii Nauk SSSR, Seriya Fizicheskaya, 1958
Vol. 22, Nr 2, pp. 208-210 (USSR)

ABSTRACT:

The mentioned dysprosium fraction was here obtained by separation from the tantalum target, which was irradiated by protons with an energy of 660 MeV. In this connection it is stated, that no data can be found in publications on the dysprosium isotope with a half life of 20 hours. Dy¹⁵⁷ was ascribed to the eighth period (reference 2). From reference 3 it can be seen, that another Dy¹⁵⁵ exists with a half life of 10 hours. In order to determine which isotopes are contained in the here obtained preparation, its conversion spectrum was investigated, which resulted in the determination of 11 peaks of conversion electrons. 6 of these possessed the same half life of 11 ± 2 hours. The energy of the electrons amounted to 180 ± 10 , 270 ± 15 , 320 ± 20 , 400 ± 25 , 465 ± 30 and 610 ± 30 keV. It was assumed, that these are K-electrons, possessing

Card 1/3

Positron Spectra of the Dysprosium Fraction

48-22-2-14/17

the transition energies 230, 320, 370, 450, 515, and 660 keV. Such transitions "apparently" correspond to Dy^{155} or Dy^{157} . The ratio of the number of positrons and of the number of conversion electron transitions with $h\nu = 515$ keV was established to be 37.5. A half life of 4.7 days and energies of 98, 112, 132 and 162 keV here corresponded to the four groups of conversion electrons. A comparison with the conversion spectrum of the dysprosium fraction as given in reference 3 permits to assume, that in this case it is concerned with the lines K-148, K-162, K-182 and K-210, which occur in the decay of Tb^{155} (the first three of them), which also pertains to the decay of Dy^{155} and Dy^{157} . Concerning the 20 hours decay period which was found in this investigation in the dysprosium fraction, it is stated here, that its origin remained unclear. Concerning this it is remarked, that in the measurements of the terbium fraction on a ketron (reference 4) positrons from a decay with a half life of 18 hours and a limit energy of ~ 2800 keV were observed, which is near to the found half life of ~ 20 hours. For this reason it is assumed, that the respective positron spectrum refers to the isotope Tb with a half life of 18 hours. There are 4 figures and 4 references, 3 of which are Soviet.

TITLE: Optimal spectrometric regime of a photomultiplier with venetian-blind dynode system

SOURCE: Priory i tekhnika eksperimenta, no. 1, 1966, 198-199

TOPIC TAGS: spectrometry, photomultiplier tube, Gamma spectrometer, scintillation spectrometer, voltage divider

ABSTRACT: The authors investigated the spectrometric properties and operating conditions of the photomultipliers FEU-13, -24, -45, and -56, with an aim at checking whether the rated supply voltages in the printed specifications for these multipliers are correct. To this end, they measured the dependence of the amplitude of the output signal and the amplitude response of a scintillation pickup on the voltage divider ratio for different total photomultiplier voltages. The tests were carried out with a gamma spectrometer with NaI(Tl) crystals used in the tests measured with the FEU-13 and -24, and with a gamma spectrometer for FEU-52 and -56. The gamma source was ⁶⁰Co. The output signal was measured with an AI-1XC and AMA-4S pulse-height analyzer. The results showed that the rated voltages do not agree with the optimal values for spectrometric purposes. The use of a voltage divider to obtain the optimal operating conditions is recommended, and the values of

TITLE: Investigation of the effect of neutron and gamma irradiation on the optical density of glasses used in some photomultipliers

SOURCE: Zhurnal prikladnoy spektroskopii, v. 5, no. 4, 1966, 486-488

TOPIC TAGS: photomultiplier, gamma irradiation, neutron irradiation, irradiation effect

ABSTRACT: An investigation was made of the effect of gamma and neutron irradiation on the optical density of glasses used for FEU-13, FEU-14, FEU-52, and FEU-56 photomultipliers. Photocathode glasses 40 and 70 mm in diameter and 1 and 2 mm thick, respectively, were used as specimens. Gamma irradiation was conducted in cobalt installations with dose rates of 100 and 1 r/sec. Neutron irradiation was conducted in the vertical channel of an IRT-2000 reactor with integral fluxes of 10^{10} , 10^{12} , 10^{14} , and 10^{16} neutrons/cm². A gamma-irradiation dose of the order of 5×10^4 r at an average quantum energy of 1.25 Mev increased the optical density of glasses approximately 1.05 times. Gamma doses of 10^7 r and higher brought about greater changes. Neutron irradiation also darkened the glasses, although the darkening was uneven. The darkening can be linked to the appearance of F-color
